

DIGITal, **CULTural** and **SCIENTIFIC COMMUNITY**: these three keywords summarise the publishing line and the mission of the scientific journal DigitCult.

DIGITal can be considered as a “toolbox”, but also as a key resource for those processes in which new things are thought and achieved through a dynamic environment which fosters transversal dimension. Therefore, much more open and autonomous in comparison to the disciplinary stiffening which we are used to.

Knowledge is the engine, and research is its application. This is why **CULT**. We strongly believe that knowledge is the capacity of being critic and reflexive about nowadays processes, including technologies. DigitCult wants to overtake stereotypes, fuelled today by an inedited and invasive circulation of information. DigitCult is a journal that wants to label with a real name objects and events occurring in our everyday life, and that we face again in research institutes and labs.

Finally, DigitCult has the ambition to create a **SCIENTIFIC COMMUNITY** with a precise identity, built up through interdisciplinary and multidisciplinary dialogue, fostering the sharing and the critic discussions of current transformations' processes and researches' results, in which the digital world, together with the cultural one, creates a continuous flow of connections. DigitCult scientific community wants to make openness one of its main point of strength. Living in the Web means opening up – and be opened up – constantly activating communication and information channels.

Highlight concepts of this journal are:

- **HISTORICAL CONSCIOUSNESS**
- **PASSION FOR RESEARCH**
- **COMMUNITY ESSENCE IN RESEARCH**

What we suggest:

- Free and open calls, starting from November the 16th, 2015
- Thematic sections accessible through invitation, planned by the Scientific Committee
- Special issues
- Double blind review reference system, distinguished and transparent
- Convenience of the web and the digital (for revisions and publication)
- Link to TECHNONEWS.IT
- Section for applied researches' dissemination

Mario Ricciardi
