Affiliation Line 2
Address, City, Country

Abstract

This document is an example using the \LaTeX template for the Scientific Journal on Digital Cultures – DigitCult, version 1.1. If submitting a paper for peer review, you can proceed to fill out the title, the abstract and the rest of your paper. Please provide also a shortened title (if needed) in page headers. Avoid providing information that might identify you as the author, as DigitCult operates a double-blind review system. After review and acceptance notification, you should return to the preamble of the \LaTeX source and fill out the author information using the `\author` and `\affil` commands above. Each command can contain more than one author name but only one affiliation. Please delete unused commands, or copy and paste to include more. Please also fill out the name, postal address and email address of the corresponding author through the `\correspondence` command.

Draft from 11th October 2016

Correspondence should be addressed to Corresponding Author name, affiliation, address. Email: mailaddress@email.xx

DigitCult, Scientific Journal on Digital Cultures is an academic journal of international scope, peer-reviewed and open access, aiming to value international research and to present current debate on digital culture, technological innovation and social change. ISSN: 2531-5994. URL: <http://www.digitcult.it>

Copyright rests with the authors. This work is released under a Creative Commons Attribution (IT) Licence, version 3.0. For details please see <http://creativecommons.org/licenses/by/3.0/it/>

Introduction

This document provides examples about how the L^AT_EXtemplate formats a paper's content.

Please do not skip over the abstract on the cover page, as it is not a real abstract but a set of preliminary instructions to be carefully read.

Manuscript Preparation

We strongly encourage authors to use this document for the preparation of the camera-ready. Please follow the instructions closely in order to make the volume look as uniform as possible.

Please remember that all the papers must be in English and without orthographic errors.

Do not add any text to the headers (do not set running heads) and footers, and do not adjust page numbers, because text will be added electronically.

Manuscript Setup

The template is composed by a set of 11 files, in the following 2 groups:

Group 1. To format your paper you will need to copy into your working directory, but NOT edit, the following 8 files:

- cc_by_logo.pdf
- custom.tfm
- custom.ttf
- dc_logo.pdf
- dc-v1.1.cls
- dc-v1.1-base.tex
- t1custom.fd
- T1-WGL4.enc

Group 2. Additionally, you may wish to copy and edit the following 3 example files:

- example.bib
- example.tex
- image.pdf

Page Setup

Styles Provided

The paper size must be set to A4 (210x297 mm).

Please use `\section` and `\subsection` to structure paper content, and avoid – if possible – third- and higher-level sections.

It is advisable to keep all the given values because any text or material outside the aforementioned margins will not be printed.

Please use footnotes for clarifications or in-depth-analysis.

Example: `\footnote{Dummy text.}`¹

Title

Use the command `\title` and follow the given structure in "example.tex". The title must be with initial letters capitalized (titlecased). In the title, words like "is", "or", "then", etc. should not be capitalized. No formulas or special characters of any form or language are allowed in the title.

¹ Dummy text.

Authors and Affiliations

Use the command `\author` and `\affil` and follow the given structure in "example.tex".

Abstract

Use the command `\abstract` and follow the given structure in "example.tex". Each paper must have an abstract up to 200 words. The sentence must end with a period.

Section and Subsection Titles

The heading of a section and subsection title must be with initial letters capitalized (titlecased). Words like "is", "or", "then", etc. should not be capitalized unless they are the first word of the title.

Example: `\subsection{First Subtitle}`

Figures

Please produce your figures electronically, and integrate them into your document and zip file.

Check that in line drawings, lines are not interrupted and have a constant width. Grids and details within the figures must be clearly readable and may not be written one on top of the other.

Figure resolution should be at least 300 dpi. High-resolution images must be uploaded separately as additional files. We strongly encourage the use of vector graphics formats, such as .EPS and .PDF.

Figures must appear inside the designated margins.

Figures should be centered and should always have a caption positioned under it. No bold or italic font style should be used. The final sentence of a caption should end with a period.

All images must be referenced in the text. Please note that the word "Figure" is spelled out. An example is provided in Figure 1.

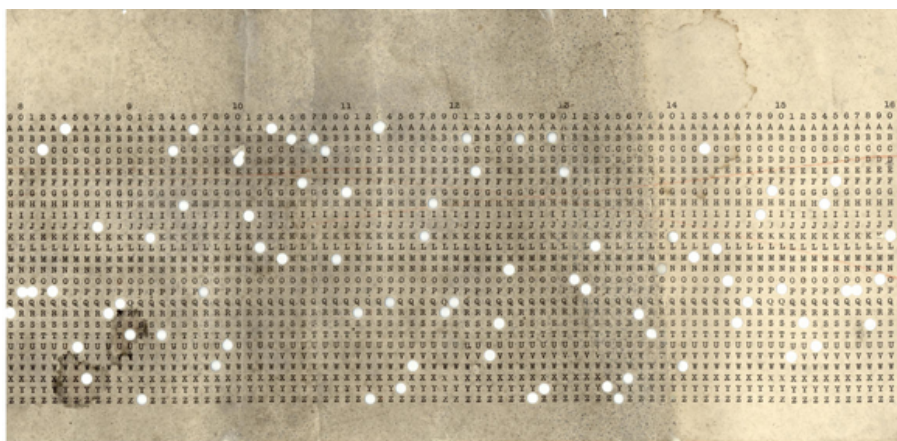

Figure 1. Example of punched card.

Equations

Equations should be placed on a separate line, numbered and centered.

The numbers accorded to equations should appear in consecutive order inside each section or within the contribution, with the number enclosed in brackets and justified to the right, starting with the number 1.

Example:

$$a = b + c \quad (1)$$

Program Code

Program listing or program commands in text should be set in typewriter form such as Courier New.

Example of a Computer Program in Pascal:

```
Begin  
Writeln('Hello World!!');  
End.
```

Reference List and Citations

All references must be included in the paper. References must comply with the Chicago Manual of Style 16th edition (author-date) style.

As example you may consider the citations (Ludovico 2013), (Libbey 2013) and (Rye and Isserlis 2008).

Conclusions

Please note that ONLY the files required to compile your paper should be submitted. Previous versions or examples MUST be removed from the compilation directory before submission.

We hope you find the information in this template useful in the preparation of your submission.

Acknowledgements

If any, acknowledgements should be placed before the references section without numbering. To do so please use the following command: \section*{Acknowledgements}
